Music Technology Group

"I dream of instruments obedient to my thought and which with their contribution of a whole new world of unsuspected sounds, will lend themselves to the exigencies of my inner rhythm." (Varèse, 1937)

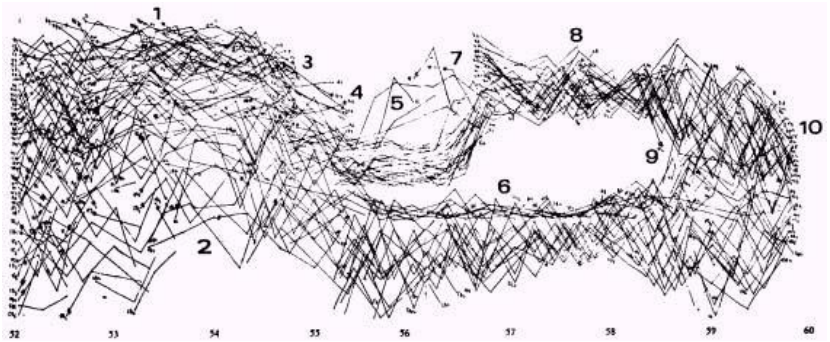
Brief historical outline

- 1950's-1960's. Algorithmic composition (Hiller, Xenakis, Koenig)
- 1950´s-1960's. Sound synthesis (MUSIC-V)
- 1960's-1970's. Sound Analysis/Synthesis
- 1970's. Music workstations (Chant, 4A)
- 1980's. Physical models, Interactive systems
- 1990's. Music information retrieval

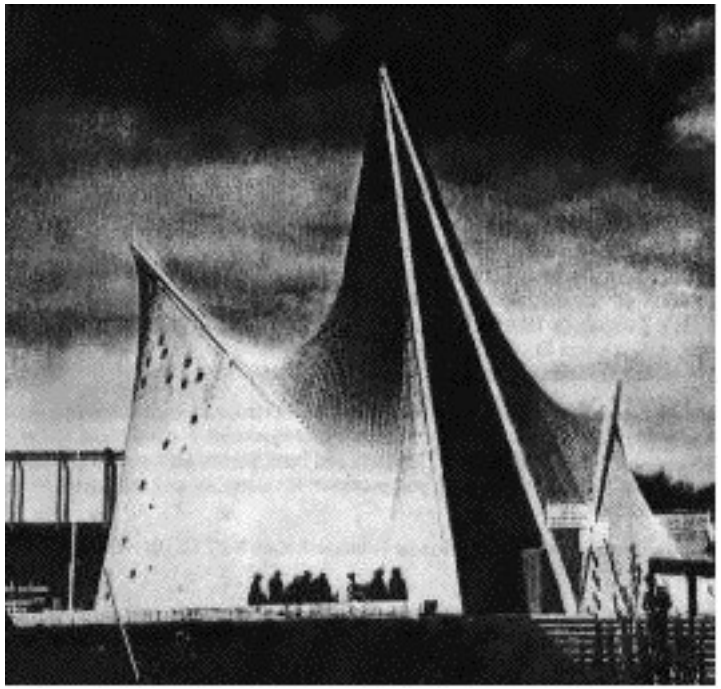
Hiller, L. & L. Isaacson. 1959. *Experimental Music*. McGraw-Hill Book Company, Inc.

- "The process of composition can be understood as the extraction of order from the chaotic multiplicity of possibilities"
- Information Theory. Method of Monte Carlo. Markov Chain.
- "The Illiac Suite" for String Quartet, 1957
  - Four experiments:
    - Monody, two an four voices
    - Four voices, first spices counterpoint
    - Experimental music
    - Music with Markov chains

Xenakis, Iannis. 1963. *Musiques Formelles*. Revue Musicale.



glissandi in "Pithoprakta"



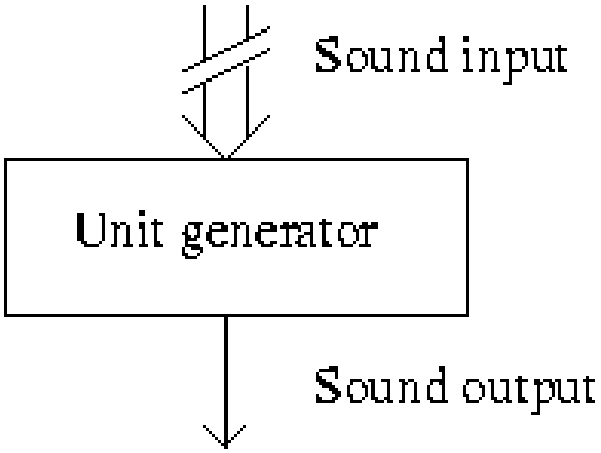
Philips Pavilion on the World Expo 58
in Brussels by LeCorbusier

Mathews, Max. 1969. *The Technology of Computer Music*. MIT Press.

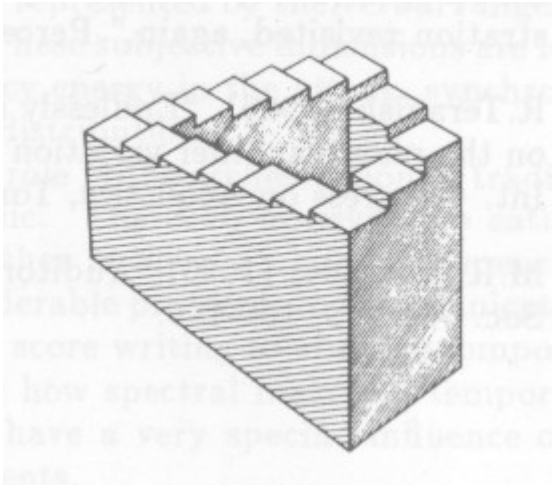
- MUSIC I-II first real computer synthesis program, developed by Max Mathews of Bell Laboratories in 1957.
- MUSIC III in 1960 introduced the concept of a "unit generator".

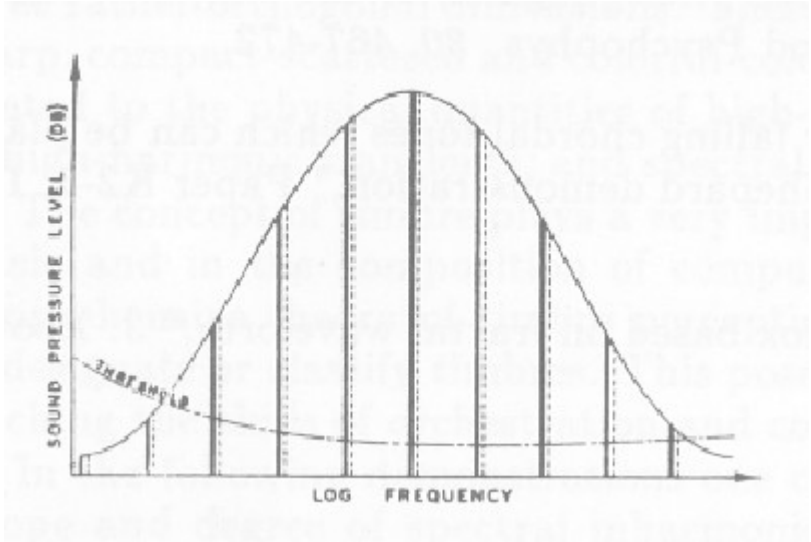
Newman Guttman, 1957:
"The Silver scale"

Daniel Arfib, 1979:
"Le Souffle du Doux"



Risset, J. C. 1969. Pitch Control and Pitch Paradoxes Demonstrated with Computer-synthesized Sounds. *JASA*.





Shepard's original paradox

Risset's adaptation

Matthews, M. & Moore, R. 1970. Groove—A Program to Compose, Store, and Edit Functions of Time. *Communications of the ACM*.

The GROOVE System
at the Bell Telephone Labs ,
c1970

Groove: Generated Real-time Operations On Voltage-controlled Equipment

Emmanuel Ghent, 1970:
"Phospones"

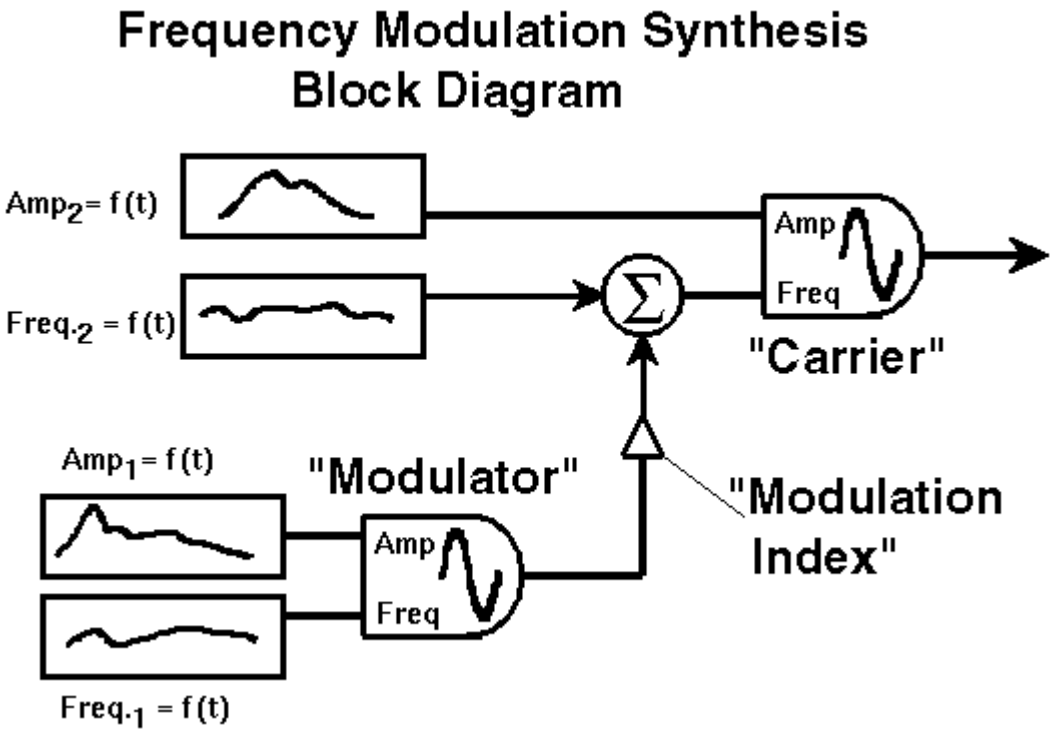
Koenig, G. M. 1970. *Project One*. Electronic Music Reports 2. Utrecht: Institute of Sonology.

- *Project 1* was born in 1964 of the wish to test the compositional rules of serial music.
- Project 2 (1966) parameters:
  - Instrument: lists of instrument names
  - Rhythm: lists for entry delays, durations, rests and tempi.
  - Harmony: a choice of three harmonic principles: chord list, row, interval table.
  - Dynamics: list of dynamic indications.
  - Articulation: list of articulation modes.

Koenig, 1982: "Three Asko Pieces" 

Smith, L. C. 1972. Score, a musician's approach to computer music. *Journal AES*.

Chowning, J. 1973. The Synthesis of Complex Audio Spectra by Means of Frequency Modulation. *Journal AES*.



FM with vibrato

From a bell to a voice

DX7 Rhodes

Chowning, 1977: "Turenas"

Moorer, J. A. 1975. *On the Segmentation and Analysis of Continuous Musical Sound by Digital Computer*. Ph.D. thesis, Stanford University.

Reference	Institute	Performance	Knowledge used
Moorer75	Stanford University	Polyphony:2 (severe limitations on content). Sounds: violin, guitar. Note range: 24.	Heuristic approach.
Chafe82, 85,86	Stanford University	Polyphony:2 (presented simulation results insufficient). Sound: piano. Note range: 19.	Heuristic approach.
Maher89, 90	Illinois University	Polyphony: 2. Sounds: clarinet, bassoon, trumpet,tuba, synthesized. Note ranges: severe limitation, pitch ranges must not overlap.	Heuristic approach.
Katayose89	Osaka University	Polyphony:5 (several errors allowed). Sounds: piano, guitar, shamisen. Note r.: 32.	Heuristic approach.
Nunn94	Durham University	Polyphony: up to 8 (several errors allowed, perceptual similarity). Sound: organ. Note range: 48.	Perceptual rules.Architecture: bottom-up abstraction hierarchy.
Kashino93, 95	Tokyo University	Polyphony: 3 (quite reliable). Sounds: flute, piano, trumpet, automatic adaptation to tone. Note range: 18.	Perceptual rules, timbre models, tone memories, statistical chord transition dictionary. Architecture: blackboard, Bayesian probability network
Martin96	MIT	Polyphony: 4 (quite reliable). Sound: piano. Note range: 33.	Perceptual rules. Architecture: blackboard

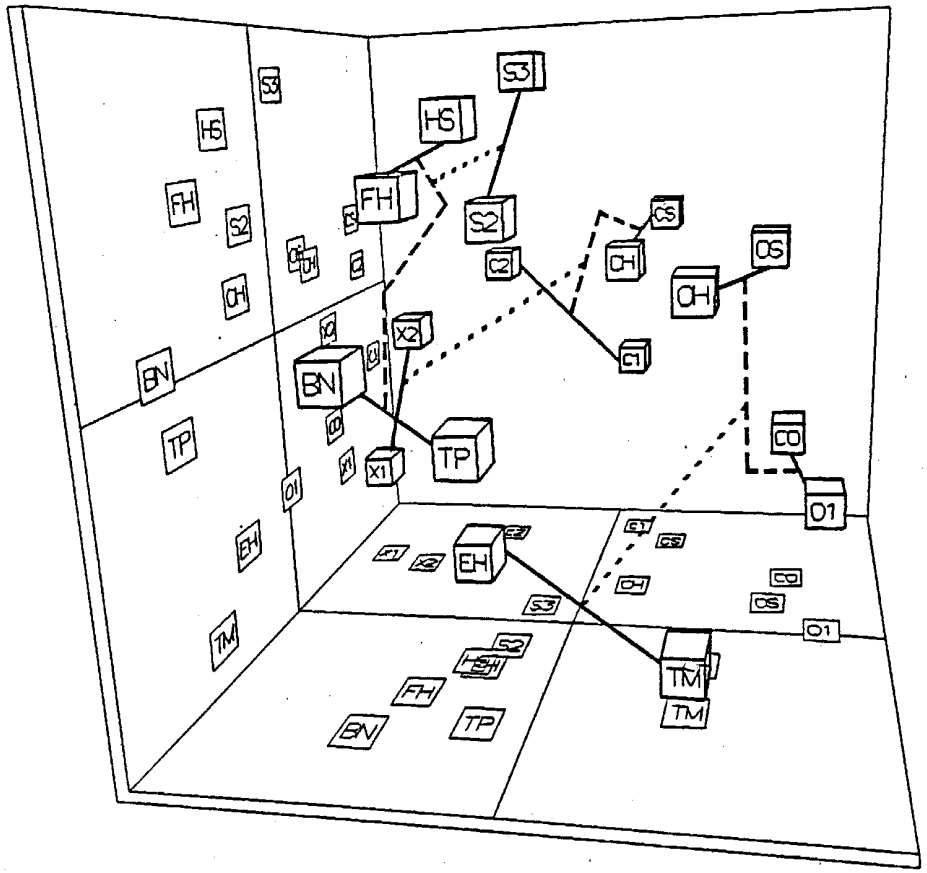
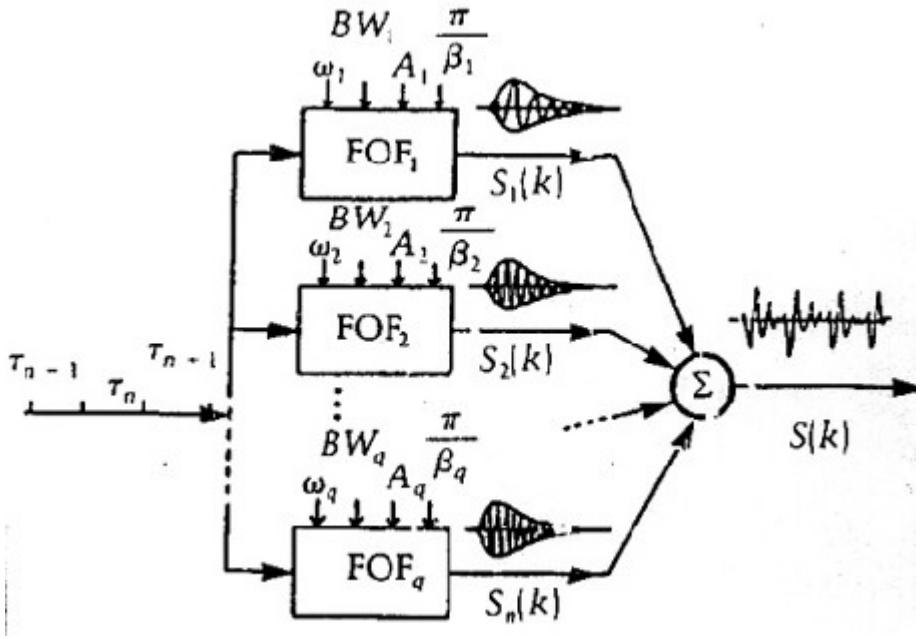
Grey, J. M. 1975. *An Exploration of Musical Timbre*. Ph.D. thesis, Stanford University.



Factors determining the timbre of a musical sound:

- Loudness
- Amplitude envelope
- Fluctuations of pitch and intensity
- Formant structures
- Temporal evolution of spectral distribution

Rodet, Xavier. 1977. *Analyse du Signal Vocal dans sa Representation Amplitude-Temps. Synthese de la Parole par Regles*. These de l'Universite Paris-6.



Aria from the Queen of the Night from the Magic Flute by Mozart

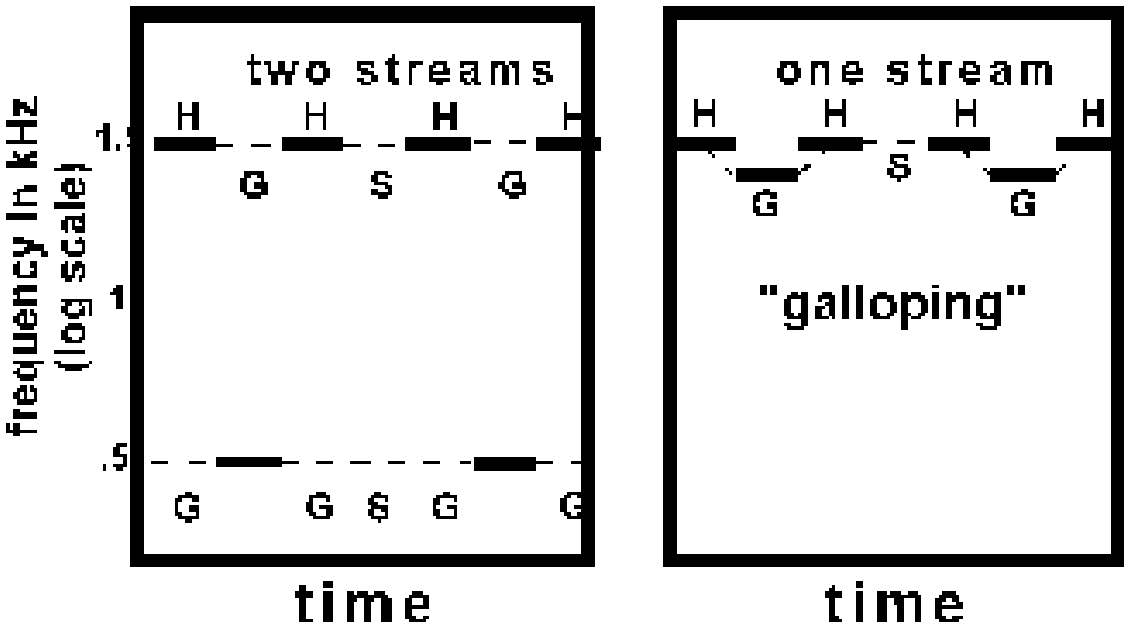
Is Purely Coincidental"

McAdams, S. & A. Bregman. 1979. Hearing Musical Streams. *Computer Music Journal.*



Auditory Scene Analysis examples

Samson, P. R. 1980. A general-purpose digital synthesizer. *Journal of the AES.*

- 256 generators (waveform oscillators with several modes and controls, complete with amplitude and frequency envelope support)
- 128 modifiers (each of which could be a second-order filter, random-number generator, or amplitude-modulator, among other functions).
- 64 Kwords of delay memory with 32 access ports could be used to construct large wavetables and delay lines. A modifier could be combined with a delay port to construct a high-order comb filter or Schroeder allpass filter--fundamental building blocks of digital reverberators.
- Four digital-to-analog converters.

Matthews, M. and C. Abbott. 1980. The Sequential Drum. *CMJ*.
